

# Unify and secure a hybrid configuration lifecycle with granular change control and proactive policy tampering detection

Change Manager for Group Policy/Intune (CMGPI) provides a single, web-based platform to govern both GPOs and Intune profiles. CMGPI centralizes configuration management and provides IT teams with granular role-based access and approval-based workflows. To reinforce the Active Directory security, CMGPI proactively monitors for out-of-band or malicious GPO changes in real time. Whether you are migrating from legacy tools like AGPM or securing a complex hybrid environment, CMGPI ensures every change is authorized, trackable, and recoverable.

## Benefits

- **Unified hybrid management:** Manage new and existing GPOs, AD containers, and Intune configuration profiles from a single dashboard without toggling between consoles.
- **Proactive security & tamper detection:** Protect your environment in real-time with automated monitoring that detects out-of-band or malicious changes, including stealthy SYSVOL injections.
- **Streamlined compliance and auditability:** Simplify reporting and navigation with 22 out-of-the-box reports and GPO tagging for better visibility and easier compliance proof.

## Features

**Granular change control:** Role-based access to delegate approvals, deployments, and editing to AD or Entra users or groups.

**Deep-dive search and query:** Quickly search for specific settings across GPOs, or Intune profiles to troubleshoot conflicts or leverage existing policies.

**Recovery in minutes:** Roll back and restore to a known-good state to limit the impact of risky or malicious changes.

## Installation Requirements

**Operating systems:**  
Microsoft Windows Server 2016 -  
Windows Server 2025

**Memory:** Minimum 100MB free RAM

**Hard Disk:** Minimum 100MB free disk space

**Additional Requirements:**  
SQL Server 2017+ or Azure SQL, Chrome or Edge browser, Microsoft .NET Framework 4.7.2+, Microsoft PowerShell 5.x
