

### WHY CMGP?

#### Group Policy change control is not an option

Group Policy has always been a powerful configuration technology for Windows. But it is also a powerful tool in the hands of an attacker. Change control of GPOs and the containers they link to is a key part of protecting your Microsoft infrastructure.

**Change Manager for Group Policy** provides a modern approach for ensuring that only approved changes happen within the Group Policy environment. This includes both changes to GPOs themselves as well as the containers that they are linked to. It provides a strong defense against unwanted or unexpected changes compromising the security of your environment.

### PRODUCT REQUIREMENTS

#### Operating Systems Supported for Installation:

Windows Server 2012-R2, 2016, 2019, 2022

#### Memory:

Minimum 100MB free RAM

#### Hard Disk:

Minimum 100MB free disk space

#### Additional Requirements:

SQL Server 2017+

Chrome or Edge Browser

Microsoft .NET Framework 4.6+

Microsoft PowerShell 5.0+

### BENEFITS

- Modern, web-based administration of Group Policy change
- Approval-based workflow for all GPO and GPO linking operations.
- Rollback of changes, with approval
- Ability to version control both GPOs and the containers that link them
- Role-based access control lets you implement fine-grained delegation of GPO management

### FEATURES

- Delegate approvals and editors to users or groups
- Special 'Break Glass' role that allows for emergency changes without approval overhead
- Easy differencing of GPO changes to see what you are approving
- Ability to rollback, reject or deploy changes immediately or on a schedule
- Support for change control of GPO settings, permissions, comments, status and links
