

### WHY CMGPI?

#### Change control is not optional

Group Policy, and now Intune are powerful configuration technologies for Windows. But they are also a powerful tool in the hands of an attacker. Change control of GPOs and the containers they link to and Intune configuration profiles are a key part of protecting your Microsoft infrastructure.

**Change Manager for Group Policy/Intune** provides a modern approach for ensuring that only approved changes happen within your Group Policy and Intune environments. This includes both changes to GPOs themselves as well as the containers that they are linked to as well as Intune Configuration Profiles. It provides a strong defense against unwanted or unexpected changes compromising the security of your environment.

### PRODUCT REQUIREMENTS

#### Operating Systems Supported for Installation:

Windows Server 2016, 2019, 2022, 2025

#### Memory:

Minimum 100MB free RAM

#### Hard Disk:

Minimum 100MB free disk space

#### Additional Requirements:

SQL Server 2017+ or Azure SQL  
Chrome or Edge Browser  
Microsoft .NET Framework 4.7.2+  
Microsoft Windows PowerShell 5.x

### BENEFITS

- Modern, web-based administration of Group Policy and Intune change control
- Three tiers of approval-based workflow for all GPO and GPO linking operations as well as Intune Configuration Profile changes.
- Rollback of changes, with approval along with email notification of all operations—restore deleted GPOs
- Ability to version control both GPOs and the containers that link them as well as changes to Intune Configuration Profiles
- Role-based access control lets you implement fine-grained delegation of GPO and Intune management
- Leverage Entra® ID Single-sign on (SSO) for maximum security

### FEATURES

- Delegate approvals, deployments and editing to AD or Entra users or groups
- Special 'Break Glass' role that allows for emergency changes without approval overhead
- Easy differencing of GPO and Intune changes to see what you are approving
- Global settings search let's you find existing settings across GPOs or Intune profiles
- Virtual "Admin Containers" let you group GPOs, AD containers or Intune profiles for easier delegation
- Ability to rollback, reject or deploy changes immediately or on a schedule
- Naming standards for GPOs and the ability to restrict certain GPO policy areas to specific users and groups
- View history of all prior changes to a given controlled object
