

# Spot configuration inconsistencies and gaps to keep Group Policy environment steady

Achieve a cleaner, more secure Group Policy environment with instant visibility into configuration inconsistencies, including duplicate and conflicting GPO settings. GP Reporting Pak automates inventory and delivers nearly 40 built-in reports on health, security, best practices, and cleanup opportunities. Make fast, yet informed, decisions on how to keep your Group Policy environment reliable and compliant.

## Benefits

- **Streamlined configuration analysis** with repeatable workflows, side-by-side comparison of GPOs or snapshots, and PowerShell-driven bulk operations.
- **Actionable insights on how to reinforce** security and compliance thanks to regular health and best-practice reports across domains and OU.
- **Planning for disruption-free migration to Intune** with clear upfront visibility into conflicting and duplicating policies. Leverage [GPO Migrator](#) to execute the migration in minutes.

## Features

**Comprehensive Reporting:** Nearly 40 built-in reports covering Group Policy health, best practices, optimization, and security assessments.

**Domain-Wide & OU-based Insights:** Visualize settings that apply to specific organizational units and detect conflicts and duplicates in context.

**Inventory and Analysis:** Centralized inventory and analysis of live or backed-up GPOs. Compare up to 4 live GPOs, backups, or snapshots to highlight duplicating, different, or missing settings.

**Scheduled Reporting:** Schedule delivery of reports via email or export in PDF, Excel, HTML, or CSV formats.

## Installation Requirements

**Operating systems:** Microsoft Windows 10/11 and Microsoft Windows Server 2016 - Windows Server 2025

**Memory:** Minimum 20MB free RAM

**Hard Disk:** Minimum 100MB free disk space

**Additional Requirements:** Microsoft .NET Framework 4.7.2+, Microsoft PowerShell 4.0+, Microsoft Group Policy Management Console (GPMC)
